### **EnergyLogic LLC Acquires the Waste Oil Heating Division of Firelake Manufacturing**

*Growing Nashville company expands its product offering as well as its distribution network to position itself for increasing opportunities within the waste oil heating industry.*

NASHVILLE, TN, April 13, 2015 – EnergyLogic LLC, a Nashville-area manufacturer of commercial heating systems fueled by recycled oil, announced today their acquisition of Firelake Manufacturing's Waste Oil Heating business. EnergyLogic undertakes this acquisition with the plan of integrating the two companies while maintaining two separate brands and distinct waste oil heating product lines.

The waste oil heating industry is experiencing renewed growth. This acquisition puts EnergyLogic in a position to capture more of a market that takes advantage of innovative technologies to heat workspaces with less energy using environmentally friendly systems that run on recycled oil.

"With a growing economy, a significant decrease in the commodity price of waste oil, and other favorable market forces, we feel now is the time to both expand our product offering and our market reach," says Rob Stevens, President and CEO of EnergyLogic. "We have spent the last few years positioning ourselves to take a leading role in providing products that create comfort and increase productivity in the workplace. Firelake's extensive distribution network and market position allow us to grow our business by serving an even larger segment of the waste oil heating market while strengthening our presence geographically".

EnergyLogic will manufacture Firelake brand units, parts, and accessories in McMinnville, Tennessee, while assembling, shipping and servicing them at their headquarters in Antioch, Tennessee. The company anticipates that the acquisition, and the increased product production that comes with it, will spur further employment in both areas.

### **About EnergyLogic LLC**

EnergyLogic is a manufacturer, seller, and innovator of environmentally friendly heating and cooling products, providing thoughtful, customized solutions geared to the individual needs of independent garages, car dealerships, and fleet management companies. We combine best-in-class waste oil [furnaces, boilers](#) and [HVLS "Big" fan products](#) with in-house support and a national network of experts, providing customers with the equipment and custom solutions they need to harness onsite energy and reduce costs and dependency on conventional energy. All EnergyLogic waste oil furnaces and boilers are EPA-approved, UL-listed and backed by the industry's longest warranty. These [waste oil burners](#) provide customers an environmentally-safe manner for recycling oil while reducing or eliminating heating bills and cradle-to-grave liability and increasing employee comfort. MacroAir fans are LEED certified and EMI compliant, backed by an industry-leading warranty. EnergyLogic's products are available direct from the company's headquarters, through their distribution partners, as well as through national retailers such as NAPA Auto Parts, O'Reilly Auto Parts, Advance Auto Parts, and CarQuest Auto Parts. EnergyLogic products are available in North America and throughout the world, with Russia serving as a primary international market.
